This CD catalog features products and services from SKF Condition Monitoring Centers and SKF Asset Management Services, business areas of SKF Reliability Systems. For the latest information visit www.skf.com/reliability or contact your SKF Representative.

About SKF Reliability Systems

About SKF Reliability Systems

SKF Reliability Systems supports industry with knowledge-based service solutions that optimize plant asset efficiency, effectiveness and integrity.

We offer portable and on-line condition monitoring equipment and integrated software and decision support systems; mechanical services, preventive and predictive maintenance, performance-based contracts and engineering consulting services. We help customers increase bottom line productivity and profitability, while minimizing capital expense.

SKF Reliability Systems includes 1,500 dedicated employees around the world, all of whom are supported by the SKF Group and its sales companies in 70 countries, its 15,000 distributors and dealers worldwide, and its e-business marketplace and global distribution system.

SKF Condition Monitoring Centers (CMC)

SKF Condition Monitoring Centers are responsible for product development, marketing, manufacturing and post-sale product support for a comprehensive range of products to monitor machine health and enable customers to avoid unplanned downtime. Each of the Condition Monitoring Centers is responsible for a defined sector of the market, enabling each Center of Excellence to focus on meeting the unique needs of its customers. Products are sold through SKF's global sales channels, either directly to end users or via distributors.

SKF condition monitoring products range from basic hand-held inspection and vibration monitoring devices through sophisticated, distributed architecture protection systems for use in hazardous areas. SKF @ptitude Monitoring Suite software forms the basis for a completely integrated approach to condition monitoring, permitting fast, efficient and reliable storage, manipulation and retrieval of large amounts of complex machine and plant information. This powerful software accepts data from the full range of SKF data collection devices and interfaces with SKF @ptitude Decision Support to facilitate consistent and reliable decision-making.

For additional comprehensive information concerning the products and services offered by SKF Condition Monitoring, please press the button.

SKF Asset Management Services (AMS)

Technology is just one aspect of effective asset management. SKF Asset Management Services team provides access to premiere consulting services and enabling technology in a broad spectrum of asset management fields. Our mission is to assist customers in achieving higher levels of asset performance and reliability.

Each Asset Management Services location has access to SKF's worldwide consulting capability and serves as the single point of contact for domain knowledge, technology, resources, information, and training in particular asset management methodologies and workflows. Our experienced experts can develop and help to implement processes to support our customers to improve their asset availability, integrity, maintainability and reliability; improve their quality and performance; reduce their total cost of asset ownership, and increase their profitability.

For additional comprehensive information concerning the products and services offered by SKF Asset Management Services, please press the button.

SKF Reliability Systems

AEO Process

The AEO Process

A process for translating asset knowledge into bottom-line value

A key aspect of any world-class asset management program is a proactive, efficient work management process, designed to ensure the effective performance of maintenance on critical assets. To achieve maximum return on investment and maintain the greatest degree of productivity, it is pivotal that organizations have a process that effectively translates asset information to knowledge, and ultimately gain value from that knowledge.

To help organizations achieve these goals, SKF offers Asset Efficiency Optimization (AEO), a management process designed to achieve maximum efficiency and effectiveness from work management activities focused on business goals for the facility.

The AEO process encompasses four key elements: **Strategy, Identification, Control and Execution**. Within each of these elements, the coordination and participation of three essential factors within the organization – process, culture, and technology – is paramount to the overall success of the AEO process.

Maintenance Strategy involves the evaluation of work activities in relationship to a facility's business objectives, a procedure that creates the documented basis for the maintenance program.

SKF Reliability Systems

AEO Process

The AEO Process

A process for translating asset knowledge into bottom-line value

Work Identification is where “work” is identified from the evaluation of a comprehensive flow of data in conjunction with an integrated decision-making process. Key to the success of Identification is a comprehensive CMMS (Computerized Maintenance Management System).

Work Control involves establishing procedures for planning and scheduling the work identified by the CMMS. Tasks are organized based on several parameters, including time and condition; job plans or procedures; man-hours required; data feedback; special requirements; and many other factors.

Work Execution is where identified, planned and scheduled work is performed. Once work is completed, feedback from the field plays a key role in measuring the overall effectiveness of the AEO process and making refinements for even greater efficiency in the future.

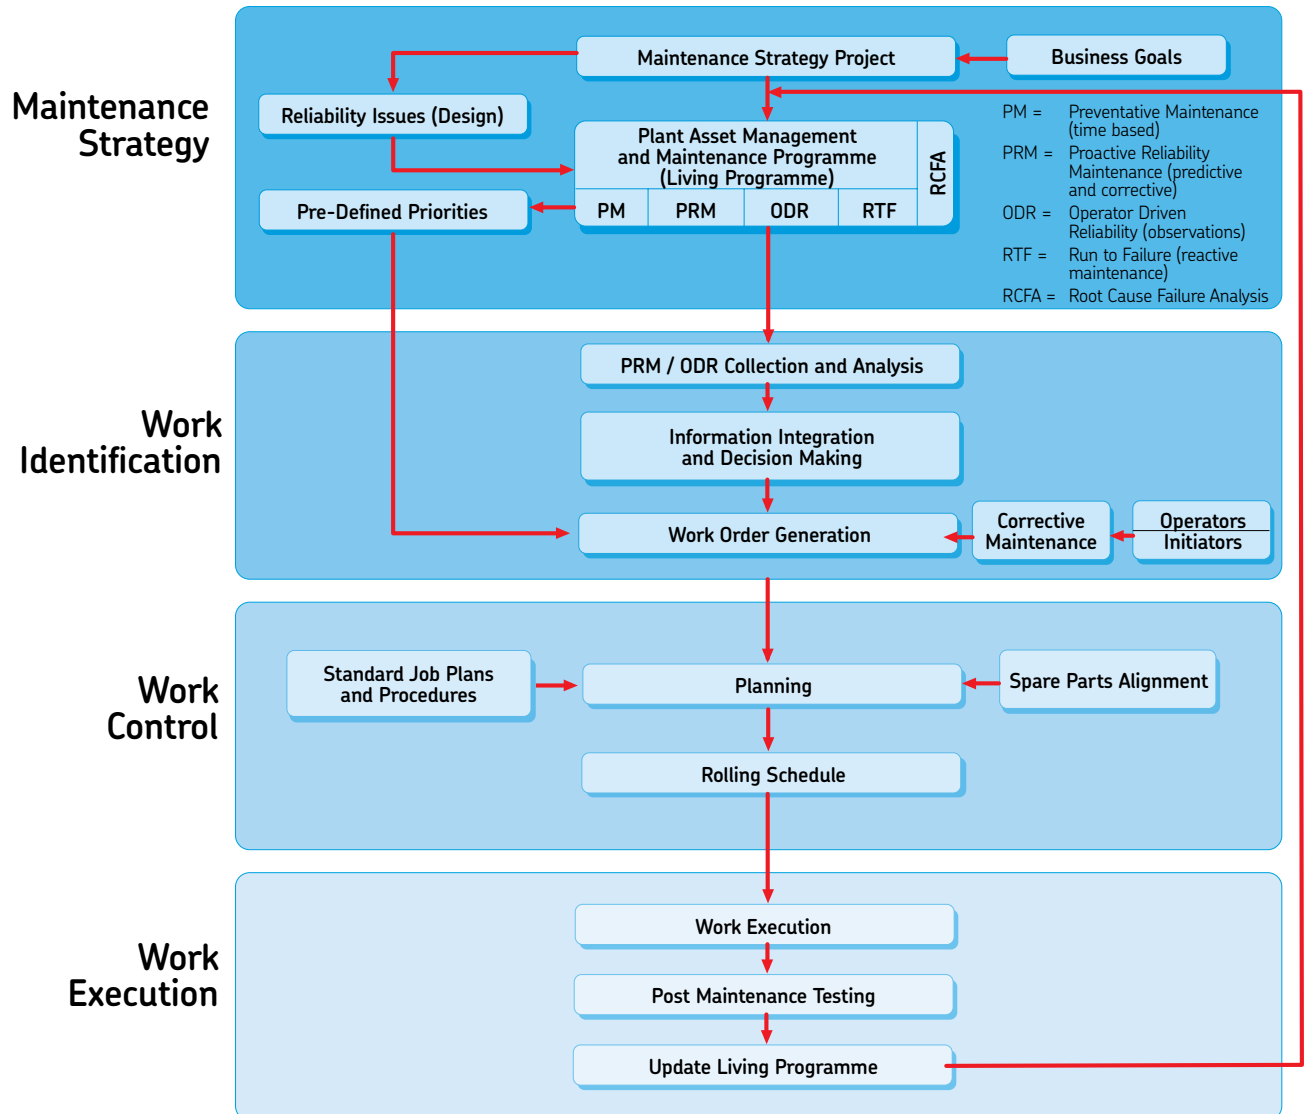

The AEO process transforms conceptual asset management to tangible competitive edge. SKF can help plan a course of action to align your reliability and risk focused maintenance strategy with your organization’s business objectives. Our team will help correct known problems, and will then work with you to assess and identify additional opportunities for improvement in the areas of production, safety and environment.

SKF Reliability Systems

AEO Process

Asset Efficiency Optimization – Work Flow Process

Maximum return is achieved when all parts of the process are implemented; however, customers can focus on first one area then another in progressive stages.
